The global threat landscape is constantly evolving and remaining competitive and modernizing our digital environment for great power competition is imperative for the Department of Defense. We must act now to secure our future. This Digital Modernization Strategy is the cornerstone for advancing our digital environment to afford the Joint Force a competitive advantage in the modern battlespace. Our approach is simple. We will increase technological capabilities across the Department and strengthen overall adoption of enterprise systems to expand the competitive space in the digital arena. We will achieve this through four strategic initiatives: innovation for advantage, optimization, resilient cybersecurity, and cultivation of talent. The Digital Modernization Strategy provides a roadmap to support implementation of the National Defense Strategy lines of effort through the lens of cloud, artificial intelligence, command, control and communications and cybersecurity. This approach will enable increased lethality for the Joint warfighter, empower new partnerships that will drive mission success, and implement new

reforms enacted to improve capabilities across the information enterprise. The strategy also highlights two important elements that will create an enduring and outcome driven strategy. First, it articulates an enterprise view of the future where more common foundational technology is delivered across the DoD Components. Secondly, the strategy calls for a Management System that drives outcomes through a metric driven approach, tied to new DoD CIO authorities granted by Congress for both technology budgets and standards. As we modernize our digital environment across the Department, we must recognize now more than ever the importance of collaboration with our industry and academic partners. I expect the senior leaders of our Department, the Services, and the Joint Warfighting community to take the intent and guidance in this strategy and drive implementation to achieve results in support of our mission to Defend the Nation.

This collection of essays focuses on the study of political development, economic growth, and social mobilization in a historical comparative context.

A collection of 11 papers excerpted from China's Economic Future: Study Papers published by the US Government Printing Office in 1996. The topics include China's transition to a market economy, an assessment of her agricultural economy, food markets, crisis and institutional evolution in her industrial sector, ownership reform as a process of creative reduction in industry, financial reform and monetary policy, and the transportation system. This IBM® Redbooks® publication is focused on melding industry preferred practices with the unique needs of the IBM i community and providing a holistic view of modernization. This book covers key trends for application structure, user interface, data access, and the database. Modernization is a broad term when applied to applications. It is more than a single event. It is a sequence of actions. But even more, it is a process of rethinking how to approach the creation and maintenance of applications. There are tangible deliveries when it comes to modernization, the most notable being a modern user interface (UI), such as a web browser or being able to access applications from a mobile device. The UI, however, is only the beginning. There are many more aspects to modernization. Using modern tools and methodologies can significantly improve productivity and reduce long-term cost while positioning applications for the next decade. It is time to put the past away. Tools and methodologies have undergone significant

transformation, improving functionality, usability, and productivity. This is true of the plethora of IBM tools and the wealth of tools available from many Independent Solution Providers (ISVs). This publication is the result of work that was done by IBM, industry experts, and by representatives from many of the ISV Tool Providers. Some of their tools are referenced in the book. In addition to reviewing technologies based on context, there is an explanation of why modernization is important and a description of the business benefits of investing in modernization. This critical information is key for line-of-business executives who want to understand the benefits of a modernization project. This book is appropriate for CIOs, architects, developers, and business leaders. Related information Making the Case for Modernization, IBM Systems Magazine

Robinson Crusoe is one of the most famous literary characters in history, and his story has spawned hundreds of retellings. Inspired by the life of Alexander Selkirk, a sailor who lived for several years on a Pacific island, the novel tells the story of Crusoe's survival after shipwreck on an island, interaction with the mainland's native inhabitants, and eventual rescue. Read variously as economic fable, religious allegory, or imperialist fantasy, Crusoe has never lost its appeal as one of the most compelling adventure stories of all time. In addition to an introduction and helpful notes, this Broadview Edition includes a wide range of appendices that situate Defoe's 1719 novel amidst castaway narratives, economic treatises, reports of cannibalism, explorations of solitude, and Defoe's own writings on slavery and the African trade. A final appendix presents images of Crusoe's rescue of Friday from a dozen of the most significant illustrated editions of the novel published between 1719 and 1920.

Inner Asia - in premodern times the little-known land of nomads and semi-nomads - has moved to the world's front page in the 20th century as the complex struggles for the future of Afghanistan, Soviet Central Asia, Tibet and other territories make clear. But because Inner Asia as a whole is divided among several states politically and among area specialists academically, broad perspectives on recent events are difficult to find. This work treats the region as a single unit, providing both an account of the region's past and an analysis of its present and its prospects in a thematic, rather than a strictly country-by-country manner.

Though his monarchy was toppled in 1979 and he died in 1980, the life of Mohammad-Reza Shah Pahlevi, the last Shah of Iran, continues to resonate today. Here, internationally respected author Abbas Milani gives us the definitive biography, more than ten years in the making, of the monarch who shaped Iran's modern age and with it the contemporary politics of the Middle East. The Shah's was a life filled with contradiction—as a social reformer he built schools, increased equality for women, and greatly reduced the power of the Shia clergy. He made Iran a global power, courting Western leaders from Churchill to Carter, and nationalized his country's many natural resources. But he was deeply conflicted and insecure in his powerful role. Intolerant of political dissent, he was eventually overthrown by the very people whose loyalty he so desperately sought. This comprehensive and gripping account shows us how Iran went from politically moderate monarchy to totalitarian Islamic republic. Milani reveals the complex and sweeping road that would bring the U.S. and Iran to where they are today.

Focuses on the defense capabilities of key Asian powers in the context of their grand strategies. Through a combination of country, regional, and topical studies, the book assesses how Asian states are modernizing their military programs in response to China's rise as a regional power, the war on terrorism, changes in U.S. force posture, the revolution in military affairs, and local security dilemmas. In addition to this central theme, each chapter examines the changing balance of power in Asia and identifies likely threats and opportunities that may arise in the next five years.
